

# Professional Services

Increase productivity by embracing the right applications and IT solutions that support your company's growth.

## Data Governance

Combine all critical analytics workloads, data integration, data warehousing, real-time analytics, data science and BI within a single lake-centric SaaS solution.

## Leverage the Power of AI

Accelerate value with AI by deploying Microsoft Copilot, integrating workflows and building custom AI applications.

## Data Security

Protect sensitive data, manage risks, prevent loss and tailor protection dynamically with a defense-in-depth security platform.

## Advanced Endpoint Management

Centralize endpoint tools, ensure compliance and strengthen security while managing device lifecycles and protecting identities.

## Cloud Management

Enable secure, cost-effective hybrid work with proactive remediation and automation using Microsoft Intune.

## Teams Platform

Empower your team to learn, create and innovate together with more productive meetings, communications and collaboration tools.

## Migrate & Secure Servers to Azure

Migrate servers to Azure for optimized performance, AI integration, hybrid management and robust security.

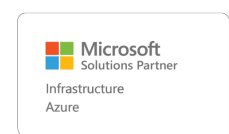

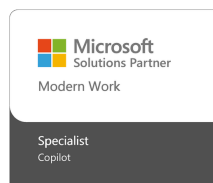

## Identity Management

Migrate to Microsoft Entra ID for enhanced security, simplified access and cost-effective, high-scale availability.

Work with a 4x Specialized Microsoft Solution Partner

# With world-class architecture, design and implementation expertise, Managed Solution works to deliver user productivity, information security and business automation to its customers.

Our dedicated Professional Services team architects each client's IT strategy by leveraging the latest emerging technology combined with industry-proven tactics to deliver the best possible result.

## Enable the right individuals to access the right resources at the right times

Provide secure access for your employees to communicate and collaborate on any device, anywhere at any time while limiting security risks. Identity and asset management allows for business agility, improves user experience and increases overall productivity.

## Manage and integrate new and existing software and applications

We help to integrate and update both new and existing applications, hardware and/or software. With each application vendor, we act as your advocate to examine and recommend the best solution based on your needs.

## Project manage IT business plans from assessment to project completion

Our team of certified and highly experienced project managers will keep you updated on project execution via weekly meeting syncs and frequent reporting until project closeout. Upon project closeout, we will formally survey the project and determine next steps during an IT Business Review.

## Identify shadow IT areas and funnel usage to approved applications

We use our proprietary methodology to uncover unapproved application installs (shadow IT). Our unique capabilities, combined with the power of the Microsoft Cloud, enable our team to carefully evaluate your firewall logs and evaluate what applications are being used and how to address them.
